Job Description

Senior Full Stack Developers are responsible for development and design of web applications including back-end functionalities and integration with front-end libraries. In general, you are supported by Product Managers, who are responsible for product specifications and business requirements, and also by Front-End Developers and UI/X Designer, who are responsible for ensuring the alignment of web design and user experience requirements, and also bridge the gap between graphical design and technical implementation. The job also includes development of API endpoints for scalable implementation across multiple products. Job Description:
• Be involved and participate in the overall application lifecycle.
• Collaborate with Product Manager and Team Leader to design and implementation of project structure and implementation of third party or library.
• Collaborate with product manager and other engineers within the team for the technical feasibility of solutions.
• Build high-quality reusable code that can be used in the future.
• Develop functional and sustainable web applications with clean and commented code.
• Design and development databases optimized for performance and handling large data sets
• Optimization of the application for maximum speed and scalability.
• Ensuring system design is scalable and optimised for high performance.
• Integration with API services and 3rd party libraries
• Develop automated test cases and response validation
• Ability to work across multiple projects and technologies in parallel
• Always eager to learn about new technologies and show initiative to implement new technologies.
• Stay up to date with current best practices.

Education & Experience

Bachelor Degree

Must Have

• Previous experience working with distributed web application software.
• Strong understanding of the web development cycle and programming techniques and tools.
• Strong problem solving and verbal and written communication skills.
• Expertise in end-end technologies and integration with JS front-end libraries
• Vast knowledge of databases; Oracle, SQL Server or similar.
• NoSQL indexing and searching; SOLR, Elasticsearch or similar
• Back-End languages; Python, PHP, C#, Coldfusion, NodeJS or similar
• Proficient understanding of web application layers including view, gateways, APIs.
• Proficient understanding of server-side error handling and debugging
• Experience using API Documentation tools like Postman, Swagger, Fluency in using Git or similar source control including workflow; branching, check-in/out code, rebasing, merging

Educational Requirements

Bachelor Degree
